WATER ROPE

5010-H2OS-EN1751

PROTECT AGAINST FLOODING

The Flair Water Rope, P/N 5010-H2OS-EN1751, works with the Inovonics EN1751 transmitter to detect leaking or flooding water or other electrically conductive fluid. The Water Rope is 1/4" diameter and comes in 5 foot length, P/N 5010-H2OS72060-EN1751, and 10 Foot length, P/N 5010-H2OS72120-EN1751. Each Rope has 72" leads and wires directly to the EN1751. Best practice is to attach Rope to floor or equipment pans with non-conductive wire clamps or zip ties. When conductive liquid touches the Rope bridging the two black helical wires the loop will short triggering an alarm. Wires are supervised and will trigger tamper alarm if cut.

INSTALL WHERE EVER LEAKS CAN OCCUR

*Sump Pumps
*Dishwashers
*Washing Machines
*Computer/Server Rooms
*Water Heaters
*Refrigerators
*Air Conditioners
*Industrial Equipment

Don't let water leaks ruin your day!!

TRANSMITTER SPECIFICATIONS:

Typical Battery Life: 3 - 5 years
EchoStream Frequency: 902-928 MHz
Check-In Time Frequency: 60 minutes
Loop: Supervised

powered by inovonics®

FLAIR MODEL 582-1015 WIRELESS ANNUNCIATOR - For multiple zone applications and local alarm notification use the Flair Model 582-1015-24 or -32 Wireless Annunciator with built-in Inovonics receiver. Each zone monitors 24 or 32 individual Water Ropes, P/N 5010-H2OS-EN1751. When water or any conductive liquid is detected by a Water Rope a Red LED on the Model 582 Annunciator and a low level adjustable Sounder (approx. 85db max.) will latch On. Two separate Push Buttons on side of Annunciator are used to silence Sounder and, once EN1751 Transmitter is secure again, reset zone.
