

THE SUPER JOURNAL

TRUSTED TECHNOLOGY FOR SUPER CAREGIVERS

THIS ISSUE FEATURES:

Graphic
Annunciators

Making Your
Life Easier

Keeping it Simple

For some assisted living homes, keeping it simple works best. For years, Super Nurse Call has been making graphic displays and annunciators to make caregivers' lives easier. Instead of scrolling through an alarm panel or computer to guess which door is open or what resident needs help, your staff will be able to determine what door or what room needs their attention instantly. This allows your caregivers to act quickly and efficiently.

The graphic annunciators are stand-alone wired or wireless systems that have the electronics built-in to monitor magnetic contacts or locks at doors, push buttons, patient pull cords, and even water leak sensors, motion sensors, or any other device. Graphic displays and annunciators can be either mounted on the surface or recessed in the wall. The layout of the facility is printed from a pdf or ACAD on white vinyl with a Lexan layer for extra protection. A low-level chime alerts caregivers and a bright red LED shows which door is open or where there is a call for help.

Making Your Life Easier

At Super Nurse Call we love to make caregiver's lives easier. We strive to provide super service every time. And sometimes that is the little things like answering the phone in person, responding to an email right away, and sometimes that is a matter of life like addressing technical issues with a call system right away. No matter what the issue, our mission is to provide trusted call systems and service that enable caregivers to be super. According to Ian Parker, Head Nurse at OCDC, "Their call system makes our nurses lives easier and provides for a quality experience for our patients. Super Nurse Call even customized the call panel cover with our logo."
