Security Sensors You Can Rely On

Assisted living homes can benefit from the versatility of Super Nurse Call's wired and wireless call systems and variety of sensors. In addition to traditional room call devices like pendants and pull cords we can provide door sensors, perimeter gate sensors, motion sensors and even water leak sensors. These sensors can be monitored by the same call system that ensures the safety of your residents and provides you peace of mind that your entire facility is secure.

For example, our customer JEA Senior Living uses heavy duty magnetic contacts on their perimeter gates so caregivers are immediately notified if one of these gates is left open. Another customer, Parkridge Senior Campus, uses our water sensors in their laundry and bath areas. Water damage due to leaks is the highest category of claims filed with insurance companies in our country.

Thank You Super Caregivers

Staff and residents at long-term care facilities were especially hard-hit by the first year of the pandemic, accounting for 31% of all COVID-19 deaths in the United States. Now a third of the nation's nursing homes have reported a shortage in staff.

We would like to extend our gratitude to all frontline workers who have been working tirelessly through these unprecedented times. Super Nurse Call honors you because you are all super too. Thank you for everything you do and sacrifice to keep your residents and staff safe! We wish you and your families a peaceful holiday season.
