

THE SUPER JOURNAL

TRUSTED TECHNOLOGY FOR SUPER CAREGIVERS

THIS ISSUE FEATURES:

Notify Partnership

The Penny Test

Decrease Response Time and Labor Costs

We are excited to announce that our products are now integrated with the Notify mobile communication App and cloud-based reporting. Super Nurse Call wired and wireless call systems will seamlessly connect to the Notify App and the facility WiFi to provide caregivers and administrators unparalleled visibility of their residents security and caregiver performance.

Calls from residents will be displayed on Super Nurse Call base stations like our wireless Model ENS48 or wired Model 561A and be broadcast to caregivers' mobile devices wherever they are in your assisted living home. Caregivers will be able to pick up calls immediately and inform or request help from other staff on iPhones or Androids.

Would you like to see average call response times drop by 50% and labor cost savings of 40%? [Read more about our partnership with Notify here!](#)

When is the last time you changed your tires?

Having tires on your vehicle that are in good condition can make a world of difference in how well your vehicle performs and how safe it is to drive. With inclement weather impacting 1 in 3 Americans in 2022, it is important that your car is prepared to handle any type of driving condition.

Tires become unsafe when the tread becomes too thin, rubber is degraded by time and temperature or their sidewalls are damaged. Here is an easy test to determine if your tires need to be replaced. Insert a penny upside down into the groove of your tire tread. If you look straight at your penny and can see Lincoln's entire head, it's time to get new tires. Also known as the penny test!

At Super Nurse Call we want our super caregivers to get to work safely every time so keep an eye on your tires and replace them sooner than later!

[Learn more about the importance of keeping your tires in good condition here.](#)
